Driving ROI

**The Business Case for a Proven
Supply Chain Management Solution
for Manufacturers**

Deadlines are a huge part of every step of the manufacturing process, and when deadlines are not being met it affects every part of the supply chain. It can have a major impact on production schedules and cause significant stress to everyone who must suddenly adapt. This is especially true as customer demand becomes more unpredictable. In a recent survey of supply industry leaders, 76% identified complex patterns of customer demand as one of the top challenges they face, and 73% agreed that increasing volatility of demand was a key challenge.¹

For most manufacturers, forecasting and planning production is a very inefficient, and often spreadsheet-based process. It can therefore be very time consuming and can require significant resources, driving up operational costs. It can also mean that there is limited reliable data to drive decisions around production, short- and long-range planning, and raw materials or component purchasing. As a result, manufacturers will often increase inventory levels to protect against this uncertainty. While this can help to avoid disruptions and disorganization, it does drive up inventory purchasing and carrying costs.

Hobson & Company, a research firm focused on Return on Investment (ROI) studies, worked with Blue Ridge to explore these challenges. They conducted 14 in-depth interviews with existing Blue Ridge customers, testing and confirming the sources of value generated by the Blue Ridge solutions: Demand Planning; Supply Planning; and Integrated Business Planning (IBP). Customers found Blue Ridge addressed their challenges and delivered measurable results and a strong return on investment. The goal of this whitepaper is to highlight examples of operational and business benefits that can be realized with a comprehensive supply chain management solution.

Customers generated an
average 3-Year ROI of:

368%

Based on this analysis, a sample manufacturer with \$300M/year in sales revenue, \$45M/year in inventory, of which 30% is overstock, and requiring three full-time supply chain planners, would see positive cash flows from using the Blue Ridge Supply Chain Management solutions in 2.3 months, and generate an ROI of 368% and a total value of \$4.2M in three years.

Supply Chain Management Challenges

Improving service levels

Legacy forecasting processes are often spreadsheet driven, with limited time frames and a lack of visibility into key supply and demand data, leading to poor fill rates and low customer satisfaction. These processes often lack sophistication in their analytical capabilities and only utilize historical operational data from ERP systems, with no single solution for planning across growing SKU categories. The result can be an inability to adapt plans on the fly, in response to issues such as supplier variability, changing lead times, cost constraints, and buying schedules, leading to lost sales. Customers interviewed confirmed that these were challenges they experienced when using more manual forecasting processes, which could cost them 1-2% or more in lost sales revenue.

Reducing time spent on supply chain management

When demand forecasting efforts, including new items, identification of seasonality, and other demand variability across the entire mix, are managed via spreadsheets or less sophisticated solutions, the time required can be extensive, and true demand can be difficult to forecast. This can result in buyers losing time each day just on placing orders, and then often correcting orders, to ensure sufficient stock. Managing inventory across multiple locations can also require significant people hours and complex planning. Customers reported needing anywhere from 1-20+ full-time staff for demand planning and purchasing when managing with more manual, spreadsheet-based processes.

Reducing inventory spending and overstock

When using less sophisticated forecasting solutions, it can be very difficult to accurately predict customer demand, and to keep up with increasingly unpredictable consumer behavior. This can result in increased safety stocks, to protect against greater variability in demand, and in overstock. Some customers reported overstock of 30% or more pre-Blue Ridge. Manual processes also make it difficult to see across locations, leading to too much inventory in one location and not enough in another. This could add to inventory costs, as the result is often duplicate inventory across locations, and to transportation costs, if inventory has to be moved between locations. When purchasing is managed manually it can also limit the amount of flexibility available to take advantage of opportunities to buy more cost-effectively, adding to inventory costs as well.

Customer research identified benefits of the Blue Ridge Supply Chain Management solutions in three key areas:

Reducing Lost Sales to Increase Revenue

Decreasing Operational Costs to Reduce Expenses

Decreasing Inventory Costs to Reduce Expenses

Reducing Lost Sales to Increase Revenue

Improve service levels, reducing lost sales

Accurate forecasting is key to ensuring product is in stock to meet customer demand. The Blue Ridge Demand Planning solution handles product life cycle changes (new product introductions/end of life products), promotional events and seasonal patterns, using statistical and machine learning techniques. The IBP solution enables collaborative planning efforts involving Sales and Marketing, to capture demand signals from the field. This process further enhances accuracy of the final forecast; minimizing lost sales and meeting service levels.

"We were able to improve and stabilize our service levels, resulting in a 1% increase in sales revenues."

- Supply Chain Director

Customers interviewed reported:

2.0%

INCREASE in sales revenues due to improved service levels

Decreasing Operational Costs to Reduce Expenses

Customers interviewed reported:

40%

REDUCTION in time spent on supply chain demand planning

Reduce time spent on supply chain demand planning

The Blue Ridge Demand Planning solution automates demand forecasting efforts. Powerful machine learning trends and algorithms auto-classify and auto-select the best forecast model for each SKU, adjust forecasts automatically, and continuously improve forecast accuracy to consider all types of demand behavior.

"Blue Ridge allowed us to reduce the time spent on demand planning and purchasing tasks by 25-50%."

- CEO

Reduce time spent on S&OP input, prep, and meetings

Data collection and reporting for S&OP is time-consuming, labor intensive and error-prone. Blue Ridge IBP provides a unified, app-like simplicity that breaks down walls to deliver a truly agile and collaborative planning experience in the cloud, to align demand, supply, revenue, and financial plans, and craft one consensus operational plan.

"Upfront collaboration in advance of planning/S&OP meetings is 25% more efficient now, saving about a week of effort per month."

- Forecasting Director

Customers interviewed reported:

30%

REDUCTION in time spent on S&OP input, prep, and meetings

Decreasing Inventory Costs to Reduce Expenses

Reduce inventory overstock / one-time inventory correction

Predicting forecasts accurately, considering seasonal patterns, trends, life cycle changes and promotional events, is a key prerequisite to reducing inventory while maintaining service levels. Blue Ridge Demand Planning provides powerful machine learning to improve forecast accuracy, while Supply Planning optimizes inventory based on forecast and customer orders, incorporating safety stock and considering variability in demand. The IBP solution enables collaborative planning efforts with Sales, Marketing, and Supply Chain Planning, further enhancing accuracy of the final forecast.

"We've seen a 30% reduction in overstock over the first three years with Blue Ridge."

- Supply Chain Manager

Customers interviewed reported:

20%

**REDUCTION in overstock
inventory / one-time inventory
correction**

Customers interviewed reported:

2.0%

**REDUCTION in annual inventory
purchasing and carrying costs**

Reduce annual inventory purchase costs and carrying costs

Blue Ridge makes it easy to model, select and execute scenarios to achieve the best financial outcome. With the ability to analyze cost-of-service trade-offs of decisions before they're made, with clear visibility into strategic investments, spend and profit opportunities. Supply Planning offers demand planners and purchasers an optimal course of action to manage purchase orders, lead times, and inventory levels. The IBP solution also enables better trend prediction, and better responsiveness to shifts in market conditions.

"With Blue Ridge we've been able to reduce inventory by 10% per year, reducing total inventory costs by more than one million dollars."

- Supply Chain Director

Key Findings

Research Results

The value of a comprehensive supply chain management solution is immediate and demonstrable. Using a sample manufacturer moving from more manual/spreadsheet-based processes, with the following inputs (pre-Blue Ridge):

- An average of \$300M in annual sales revenues
- \$45M in inventory purchase costs per year, with carrying costs averaging 25% of this total
- 30% of inventory that is overstock
- Three full-time supply chain planners
- About 70 hours/month spent on S&OP across functions

A three year investment of \$890K in total for the Blue Ridge products (Demand Planning, Supply Planning, and IBP) generates positive cash flows in 2.3 months. The three-year total value created and return on investment are strong at \$4.2M and 368%, respectively.

Investment vs. Return

Benefits by Business Objective

About Blue Ridge

Achieving a resilient supply chain sits at the intersection of demand, price, and inventory – where a company's customers, suppliers, and operations meet. The Blue Ridge cloud-native planning and pricing platform gives distributors, retailers, and manufacturers simplicity that uniquely integrates data science-rich inventory forecasting capabilities with price insights. From modeling, right-sizing inventory, and seamless collaboration, Blue Ridge bases its success on an increase in customer profitability and service levels. About Hobson & Company

Hobson & Company helps technology vendors and purchasers uncover, quantify and validate the key sources of value driving the adoption of new and emerging technologies. Our focus on robust validation has helped many technology purchasers more objectively evaluate the underlying business case of a new technology, while better understanding which vendors best deliver against the key value drivers. Our well researched, yet easy to use ROI and TCO tools have also helped many technology companies better position and justify their unique value proposition. For additional information, please visit www.hobsonco.com.
